President

Keiichi Aoyama

Since the establishment of our company, we have pursued possibility of "gravity" metal mold casting. We collected know-how for half a century by getting at the true nature of every problem we face and putting in considerable thoughts towards a solution. We will continue striving for possibilities of the "gravity" method. There always await our customers who require our technologies.

In 2019 we constructed a new factory and installed cutting-edge facilities there, improving our company system and providing solutions at an even higher level. At Sanyo Alumi, each worker thinks and strives by trial and error to produce best products. We take pride that we offer the fruits of precious technologies supporting manufacturing industries all over the world. Please look forward to what our thinker-engineers will be able to offer next.

Products and Services

Our main business field is aluminium casting: casting molten metal into a mold and cooling it to set, to make products. You can find many examples of casting technologies in our everyday life: car and motorcycle parts, farm machines and tools, confectionery packaging machines, and spinning machines. From designing and prototyping to production, we manufacture those products in an integrated production system. Demand for high-strength, light-weight aluminium has been increasing year by year, and we receive every possible request for specification variations from customers in many industries and business types. Occasionally, a customer sends us a request that they would need such and such a product, and together with them, we make effective use of our technologies and produce what they need.

Equipment and facilities

New factory built in 2019

Semi-automated. Cutting-edge facilities. Optimized connection between production lines.

In the clean shop, everything is kept in order.

The new factory contributes not only to improved production efficiency, but also to realization of ideal working conditions.

Workers on the shop floor.

Equipped with casting facilities and all sorts of machine tools to meet customers' needs.

Company PR

At Sanyo Alumi, where we have built our fundamental manufacturing technologies by ourselves, new employees would have so many skills to learn and would find themselves growing. Though located in the mountains of Okayama, we have quite a few of world class manufacturers as our customers. As aluminium products, used in many fields and business types, are constantly in demand regardless of economic ups and downs, our business performance is stable.

Factory tour, internship, etc.

Please do not hesitate to inquire us should you like to come for a factory tour - we would be glad to show you around our production floors including the new factory, also we would show you our original furniture series, the Century, where our aluminium processing expertise and quality wood are combined. The Century has appeared in local newspapers and drawn growing attention.

Recruitment history

Okayama University of Science
Technical colleges: Okayama Cooking College
National Institute of Technology, Tsuyama College
High schools:
Kastumada High School, Okayama Mitsu Senior High School, Tsuyama Technical High School
Others

Ideal applicants

With many young employees working, our company is warm and cozy. Senior workers give security and comfort. There are many occasions to mingle with each other - it is our strength to have a friendly atmosphere. Seniors are also friendly so new employees can work naturally. Consequently, our employee retention rate is high so actually, many of the employees started working here without previous experience or knowledge about the industry. You can obtain skills after joining the company. We will welcome those who are interested in manufacturing.

Message to applicants

We believe that, in order to satisfy customers, all of us at the company must be satisfied and happy. We know you have different hopes, such as "I want to grow as a human," "I want to have a stable life," "I want to contribute to the society," and "I want to have a broad experience," and we would like to help you become happy through work. If you are interested in working for a manufacturer, in production or design, please contact us.
