## Products and Services

### Industrial machinery:

Developed to make the most of environmentally friendly "water energy," Our industrial pumps are used for pressure washing. Our pump technology, cultivated over many years, has been highly valued and used not only in Japan but also in American and European countries.

### Devices for environmental hygiene:

Our power sprayers are used to deodorize and disinfect livestock sheds (for chickens, pigs and cattle). They are also used in various environmental hygiene fields: for disinfecting Avian (bird) influenza viruses, foot-and-mouth disease viruses, and other viruses and germs. A more daily use of the sprayers is cleaning of air conditioners in offices and homes.

### Fire extinguisher recycle (extinguishant recycle):

Recycling a fire extinguisher means to take out the powder (extinguishant) from a collected fire extinguisher, then dry, refine and reuse it as if it is new. Up until now, used extinguishant has been buried in a landfill site, but Seibu Maruyama recycles it for maintaining environment. We are one of seventeen recycling sites for extinguishant in Japan, and the only one in the Chugoku area (western Honshu).

## Equipment and facilities

President

Kosuke Ōhira

Seibu Maruyama was established in 1986 as a fully owned company of Maruyama Manufacturing. We constantly strive to anticipate customers' needs in advance, only to be able to hear from them "We will place the next order, too, with you." Our main products are agricultural pest-control sprayers, pressure cleaners and industrial pumps. The agricultural products have a good reputation among customers all over Japan, and industrial pumps are exported to America and Europe. Recently, with our high technology, our business fields are expanding from agriculture to manufacture, construction, and hygiene maintenance. Looking at how agriculture and environment will change later in this century, we will make great advances as a company contributing to the society under our motto "Take a sincere approach towards people and work."

### MC line:

We mainly process crankcases for power sprayers, using a machining center.

### SF line:

We produce industrial pumps, which are mainly shipped for pressure cleaner uses in Japan but also shipped to international markets. To ensure quality, we perform a 100% inspection of operation as a process of production.

### EC line:

Mainly, various models of set type power sprayer and pressure cleaners are produced. Self-propelled products are checked for normal braking and running performances before shipment, to ensure safety for users.

## Company Information

Our business: Production of agricultural and industrial machinery  
Head Office: 150-2, Teramoto, Kagamino-Cho, Tomata District, Okayama Prefecture 708-0323 Japan  
Established: November 1986
