President

Keiichi Nakamura

- We produce quality products meeting customers' needs and expectations.
- We create a high environmental culture satisfying international standards.
- We create a working environment to enable employees to make their dreams come true and their lives fulfilling.

In order to materialize this company philosophy, we create "a steady flow of life" in our environment where all our customers including all workers there, their production sites and their products exist, and we put best possible value in our products by combining many types of information, technologies, facilities, mechanisms and processes. We are convinced this would deliver satisfaction to our customers, regardless of whether what we deliver is a small machine part or a big project. Our priority is to think from their point of view what our customers would really need, and to act accordingly.

Company Information

Industry: Metal Product Manufacturing
Head Office: 2-1-32, Honden, Nishi-ku, Osaka, 550-0022 Japan
Established: 2004
Capital: 90 million yen
Annual Sales: 17 billion 455million yen
President: Keiichi Nakamura
Number of employees: 196 (whole company: 396)
Offices and Factories: Kusakabe Factory, Ayabe Factory, Techno Center, Development and Testing Center, Kawasaki Sales Office, Takasaki Sales Office

Products and Services

Not only beverage, food and pharmaceutical companies, but biotechnological and LSI companies are also our main customers. We produce stainless sanitary machines, valves, pipes and tanks, further, we design, install and maintain production facilities.

Equipment and facilities

Vertical composite processing machine:

Precision processing by a 5-axial control allows even a complex shape to be cut out in a chuck.

Opposing spindle type composite processing machine:

This 5-axial composite processing machine with a loader keeps working 24 hours a day.

Deburring system:

Robotized deburring was developed, enabling operation to be unmanned or done with less manpower.

Company PR

Our customers are in food, pharmaceutical, cosmetic and semiconductor industries: common to all of them is a "thorough quality control." It is no exaggeration to say we are the only company whose production lines have all three of "technology to ensure keep total sterility through the production lines," "product-planning ability to meet customer's request" and "maintenance service technology" well-balanced. We maintain great trust from our customers as a company with total sanitary technology and, obviously, many of our own stainless products are used in our production lines. As a partner company we support the production sites of famous corporations in each of the above industries.

Factory tour, internship, etc.

We will consider the possibility of a tour to our factory or technology center every time we have an inquiry or request.

- Kusakabe Factory
- Ayabe Factory
- Techno Center
- Development and Testing Center

National Institute of Technology (Tsuyama College)

Ideal applicants

An ideal applicant would be a "challenger with intellect." That is, a person who can judge things from a cool-headed point of view then carry a plan into action with passion. At Toste, even young workers are entrusted with high-level tasks. We think it is even more important that they are willing to face up to such tough tasks than seeking for perfect results. We have a corporate identity that we develop human resources capable of action.

Message to applicants

We would welcome those who have a fighting spirit and would like to "self-actualize through work." To this end, we are trying to produce, and will always be producing, an atmosphere that our employees feel "this company has a dream to realize." Let us fix our eyes on what things will be in ten or twenty years' time and make our "dream" come true together.
